/note="Organ: Kidney; Vector: pExpress-1; Site_1: EcoRV;
Site_2: Not1; RNA obtained from pooled kidney tissue from
a mix of male and female animals at 8 wk old. Tissues were
snap-frozen before RNA extraction and purification
(Tri-reagent method). CDNA was primed using oligo-dT
primer: 5'-pGACTAGTCTAGATCGCGAGCGCGCC(T)25-3' and
cloned into the EcoRV/Not1 sites of pExpress-1.
Size-selection >1.4kb resulted in an average insert size
of 2.2 kb This primary library is non-normalized
(normalized primary library is NIH_MGC_236) and was
constructed by Express Genomics (Frederick, MD). Note:

New nucleic acid molecule encoding polyvalent cation-sensing receptor protein, useful for regulating adaptation of fish e.g. flounder to marine and fresh water environments, and to alter tissue or meat/muscle composition.

Claim 4; Fig 5A-E; 83pp; English.

polyvalent cation-sensing receptor protein (PVCR), especially Shark Kidney calcium receptor related protein-I (SKCaR-RP-I) that allows fish to sense ion concentrations. The aquatic PVCR allows the successful adaptation of fish, such as flounder, to marine and fresh water environments, and controls maturation and developmental stages in marine species. Modulating the expression of PVCR activates or inhibits PVCR The invention describes an isolated nucleic acid sequence (1) encoding a

                                                                                                                                                                                            셤
                                                                                                                                                                                                                                                                   à
mediated ion transport and endocrine changes that permit fish to adapt to fresh or salt water. Activating PVCR in epithelial cells increases or decreases salinity tolerance in aquatic species. Regulating salinity tolerance is useful to develop new species of marine fish that are easily adaptable to fresh water aqua culture. The methods are useful for altering body composition e.g. fat content, protein content, weight, thickness, moisture and taster. The species can be maintained in both environments, consecutively to reduce parasites, bacteria and contaminants. This is the amino acid sequence of the shark kidney calcium receptor related protein-1 (SKGR-RP-1), described in the method of the invention. (Updated on 07-AUG-2003 to correct OS field.)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention describes a method for improving the raising of pre-
adult anadromous fish maintained in fresh water prior to transfer to
seawater. The method involves: (a) adding at least one polyvalent cation
sensing receptor (PVCR) modulator to the fresh water; and (b) adding a
feed containing an agent that increases the level of PVCR modulator in
the serum of fish. The PVCR modulator has anabolic activity. The method
can be used for improving the raising of pre-adult anadromous fish e.g.
salmon, char and trout, maintained in fresh water prior to transfer to
seawater. The present sequence represents dogfish shark kidney cation
receptor (SKCaR), which is relative to the PVCRs from salmon, char and

The invention comprises the amino acid and coding sequences of polyvalent cation sensing receptor (PVCR) proteins from Atlantic salmon. The DNA and protein sequences of the invention are useful in the commercial raising of Atlantic salmon and the restoration of wild Atlantic salmon populations, especially in the transfer from freshwater to seawater with increased growth and reduced mortality. The present amino acid sequence represents a shark PVCR-related protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         240

The invention relates to aquatic polyvalent cation-sensing receptor (PVCR) proteins and methods of regulating PVCR functions in aquatic species. PVCR is used to screen candidate compounds that may be used to assist fish in adapting to changing ion concentrations by altering water intake, water absorption or urine output and/or for modulating the percentage of total fat, protein and moisture of muscle of the fish. The present sequence is dogfish shark kidney calcium receptor related protein method of the invention
                                                                                                                                                                                                                        Fish polyvalent cation-sensing receptor proteins, useful for assisting fish in adapting to changing ion concentrations by altering water intake and absorption, urine output or for modulating the fat, protein and moisture content of muscle.

The present invention relates to methods for improving the raising of pre-adult anadromous fish or preparaing these fish for transfer to seawater by modulating expression of a receptor referred to as the Polyvalent Cation Sensing Receptor (PVCR). The invention is useful in increasing survival and growth and reduce stress of the fish that have been transferred to seawater. The present sequence is a dogfish shark cation receptor (SKCaR) protein.
pre-adult anadromous fish in freshwater comprises adding feed ng an amount of NaCl for fish consumption to the freshwater to the level of the Polyvalent Cation Sensing Receptor modulator the fish.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               XNEYKAFLRTIPNDEQQATAMAEIIEHFQWNWVGTLAADDDYGRPGIDKFREEAVKRDIC

Its amino acid sequence was deduced from a kidney cDNA clone (see AAR89290). It shows 74% homology to rat kidney PCVR and bovine parathyroid PVCR and possesses general features that are homologous to PVCR proteins, including a large extracellular domain, 7 transmembrane

domains and a cytoplasmic C-terminal domain. Also claimed are: an isolated PVCR present in the plasma membranes of aquatic species, especially on the apical membrane of epithelial cells of elasmobranch fish, particularly from cells found in the collecting duct or late distallubule in the kidney, intestine, gill, rectal gland, gonad or brain; an antibody that specifically binds to a PVCR; and a method of screening for the aquatic PVCR activates or inhibits aquatic PVCR mecivates or inhibits aquatic PVCR mediated ion transport and endocrine changes that permit fish to adapt to fresh or salt water. The method facilitates the aquaculture of marine fish and can provide for the development of marine fish that are easily adaptable to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       3

The present sequence representing an avian (chicken) calcium-sensing receptor (CaR) is isolated from chicken parathyroid gland cDNA clone CLD. CaR is involved in regulating extracellular calcium homeostasis by controlling PTH (parathyroid hormone) secretion. The polymucleotide encoding car is useful for producing calcium-sensing receptor protein, which can be used to regulate extracellular calcium homeostasis and to regulate serum calcium more rapid growth is obtained due to an increased rate of bone deposition, and eggs of higher quality are increased rate of bone deposition, and eggs of higher quality are corduced. A DNA construct comprising the CAR polymucleotide is useful for developing transgenic animals expressing a mutated form of the calcium-sensing receptor. The CAR polymessing a mutated form of the calcium-sensing receptor. The CAR polymessing a mutated form of the calcium-sensing receptor. The CAR polypeptide can be used to produce antibodies to CAR, which can be used to detect the presence of CAR protein using immunoassays. Also described are methods and compositions which can be used to modulate the serum concentration of calcium in humans and animals
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              720
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    780

                                                                                                                                                                                                                                                                                09
                                                                                                                                                                                                                                                                                                              26
heart failure, hypotension, hypertension, urinary retention, osteoporosis, andina pectoris, wycardial infarction, stroke, ulcers, asthma, allergies, benign prostatic hypertrophy, migraine, vomiting, psychotic and neurological disorders including anxiety, schizophrenia, manic depression, depression, delairium, demantia and severe mental retardation, and dyskinesias, such as Huntington's disease or Gilles d'a Tourette's syndrome. The polypeptide is useful for structure-based design of agonist, antagonist or inhibitor of the calcium-sensing receptor. The DNA sequence is useful for chromosome localisation studithe polypeptide and nucleic acid are also useful as vaccines
                                                                                                                                                                                                                                                                                                                                                                   1 MAQIHCQILFLGFTLLQSYNVSGYGPNQRAQKKGDIILGGLFPIHFGVAAKDQDLKSRPE

Novel Cynomolgous Monkey Calcium-Sensing Receptor polypeptides are useful for treating infections, pain, cancer, diabetes, obesity, asthma, schizophrenia, hypertension, urinary retention, Parkinson's disease and

The sequence represents the amino acid sequence of Cynomolgous monkey calcium-sensing receptor. The calcium-sensing receptor nucleic acid and polypeptide are useful for treating bacterial, fungal, protozoan and viral infections, particularly infections caused by HIV-1 or HIV-2, pain, cancer, diabetes, obesity, anorexia, bulimia, Parkinson's disease, acute

                                                                                                                                                                                  The present amino acid sequence is the wild type human calcium sensing receptor CaSR, expressed in the kidney. There are multiple alternatively spliced isoforms of CaSR, that arise from partial deletion of residues from this wild type sequence. The CaSR isoforms have hypotensive and osteopathic activity. The isoforms can be used to identify agonists and antagonists that modulate the receptor activity and calcium levels. These modulators are useful for treating hyperparathyroidism or osteoporosis, Pager's disease, hypercalcaemia malignancy or hypercension. The DNA sequence is also useful for altering the CaSR activity and in gene

The invention discloses a composition comprising two or more isolated rate or human polynucleotides or a polynucleotide which represents a fragment, derivative or allelic variation of the nucleic acid sequence. Also claimed are a vector comprising the nucleic acid sequence. Also claimed are a vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a subjected to pain and a subjected to pain, an actor of the polynucleotide sequence that is differentially expressed in neuronal tissue of a first animal subjected to pain, a method for identifying a compound which regulates the expression of a polynucleotide sequence which is differentially expressed in neuronal tissue of a first animal subjected to pain, a method for identifying a compound that regulates the activity of one or more of the polynucleotides, a method for producing a pharmaceutical composition, a compound that regulates the activity in an animal of one or more of the polypeptides or their activity in an animal of one or more of the polypeptides or their antibodies. The polynucleotide or the compound that paramaceutical composition comprising the one or more polypeptides or their antibodies. The polynucleotide or the compound that modulates its activity is useful for preparing a medicament for treating pain (e.g. spinal segmental nerve injury (Chung), chronic constriction injury (CCI) and spared nerve injury (SNI) in an animal (e.g. gene the sequence data for this patent did not form part of the printed for the specification) which is patent did not form part of the printed for the injury form in the sequence data for this patent did not form part of the printed for the injury form the form part of the printed for the injury form the pacetification but was obtained in electronic form directly from MIPO at the injury in the informance or the compound and the formance or the compound and the formance or the compound and the formance or the compound the formance or the compound the formanc
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New composition comprising two or more isolated polypeptides, useful for preparing a medicament for treating pain in an animal.
                                                                                                                                                                     pain; neuronal tissue; gene therapy; segmental nerve injury; chronic constriction injury; CCI; nerve injury; SNI; Chung.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention discloses a composition comprising two or more isolated rat or human polymucleotides or a polymucleotide which represents a fragment, and arrivative or allelic variation of the mucleic acid sequence. Also claimed are a vector comprising the movel polymucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a carry, a method for identifying an agent that increases or decreases the expression of the polymucleotide sequence that is differentially expressed in neuronal tissue of a first animal subjected to pain, a method for identifying a compound which regulates the expression of a polymucleotide sequence which is differentially compound that regulates the activity of one or more of the compound that regulates the activity of one or more of the compound that regulates the activity of one or more of the compound for identifying a compound or small molecule that regulates the security in an animal of one or more of the polymetides given in the sequence for identifying a compound useful in treating continuous of the intention of the intention of the polymetides of the compound that regulates its activity is useful for preparing a medicament for treating polymetides or their antibodies. The polymucleotide or the compound that the regulates its activity is useful for preparing a medicament for treating confulates its activity is useful for preparing a medicament for treating minury (CDI) and spared nerve injury (SNI) in an animal (e.g. gene the respectification) which is differentially expressed during pain. Note: the specification, but was obtained in electronic form directly from WIPO at fip. who. int/pub/published_pot_equence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New composition comprising two or more isolated polypeptides, useful for preparing a medicament for treating pain in an animal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           74.8%; Score 4044.5; DB 7; Length 1078; 74.0%; Pred. The invention discloses a composition comprising two or more isolated rat or human polynucleotides or a polynucleotide which represents a fragment, derivative or allelic variation of the nucleic acid sequence. Also claimed are a vector comprising the nucleic acid sequence. Also claimed are a vector comprising the nucleic acid sequence. Also which is differentially response in a animal subjected to pain and a subjected to pain and a subjected to pain and a subjected to pain, an artay, a method for identifying an agent that increases or decreases the expression of the polynucleotide sequence that is differentially expressed in neuronal tissue of a first animal compound that regulates the activity of one or more of the intentifying a compound that regulates the activity of one or more of the compound that regulates the activity of one or more of the compound that regulates the activity of one or more of the cativity in an animal of one or more of the pain and a pharmaceutical composition, a cativity in an animal of one or more of the pain and a pharmaceutical composition comprising the one or more of pain and a pharmaceutical composition comprising the one or more oplypeptides or their antibodies. The polymodicatide or the compound that modulates its activity is useful for preparing a medicament for treating pain (e.g. spinal segmental nerve injury (CMI) and spared nerve injury (SMI) in an animal (e.g. gene the respectification) which is patent did not form pret of the printed the specification, but was obtained in electronic form directly from WIPO at the function of the composition o
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ftp.wipo.int/pub/published_pct_sequences.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                296
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention comprises the amino acid and coding sequences of polyvalent cation sensing receptor (PVCR) proteins from Atlantic salmon. The DNA and protein sequences of the invention are useful in the commercial raising of Atlantic salmon and the restoration of wild Atlantic salmon populations, especially in the transfer from freshwater to seawater with increased growth and reduced mortality. The present amino acid sequence represents the human parathyroid calcium receptor (HuPCaR) protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                98

                                                                                                                                                                                                                                                                                                                                                                                                       This invention relates to novel mitochondrial targets that can be used for therapeutic intervention in treating a disease associated with altered mitochondrial function. Specifically, it refers to a method for identifying proteins of the human heart mitochondrial proteome that are useful for drug screening assays, as well as therapeutic targets. The present invention describes a method for identifying such proteins that can be used in the treatment of various diseases associated with altered mitochondrial function including diabetes mellitus, Huntington's disease, osteoarthritis, Leber's hereditary optic neuropathy (LHON), mitochondrial concephalopathy lactic acidosis and stroke (MELAS), myoclonic epilepsy ragged red fibre syndrome (MERAP) or cancer. Accordingly, these compositions have neuroprotective, nootropic, antidiabetic, antiarthritic, osteopathic, ophthalmological and cytostatic activities. This polypeptide sequence is a human heart mitochondrial protein of the invention.

human G-protein coupled receptor polypeptide and polynucleotide, inl for diagnosing, preventing, treating or ameliorating a medical lition, e.g. reproductive disorder, immunodeficiency disease or useful for condition.

Disclosure; SEQ ID NO 74; 290pp; English.

The invention relates to an isolated human G protein-coupled receptor polypoptide and its encoding polyhuchcoride, including the full length proteins minus the start methionine (and the region of the polyhuchcolide condition than the protein region). The proteins are designated HGRBW13-1, HGRBW14-1, HGRBW14-2, HGRBW14-1, HGRBW14-1, HGRBW14-1, HGRBW14-2, HGRBW14-1, HGRBW14-1, HGRBW14-1, HGRBW14-2, HGRBW14-1, HGRBW14-1, HGRBW14-2, HGRBW14-1, HGRBW14-1, HGRBW14-1, HGRBW14-2, HGRBW14-1, HGGRBW14-1, HGGRBW14-
